# This is a sample presentation

Using *typslides*

---

A. Manjavacas

https://github.com/manjavacas/typslides

# Contents

1. This is a *Title slide*
    - Outlined slide

# This is a *Title slide*

- This is a simple `slide` with no title.
- **Bold and coloured** text by using `#stress(text)`.
- Sample link: typst.app.
  - Link styling using `link-style`: `"color"`, `"underline"`, `"both"`
- Font selection using `font: "Fira Sans"`, `size: 21pt`.

This text has been written using `#framed(text)`. The background color of the box is customisable.

**Frame with title**

This text has been written using `#framed(title:"Frame with title")[text]`.

# This is an auto-resized *focus slide.*

- This is a `#blank-slide`.
- Available **themes**[1]:

bluey, reddy, greeny, yelly, purply, dusky, darky.

```
#show: typslides.with(
  ratio: "16-9",
  theme: "bluey",
  ...
)
```

- Or just use **your own theme color**:
  - `theme: rgb("30500B")`

---

[1] Use them as **color** functions! e.g., `#reddy("your text")`

# Outlined slide

- Check out the **progress bar** at the bottom of the slide.

```
show-progress: true
```

- Outline slides with `outlined: true`.

This is a `#grayed` text. Useful for equations.

$$P_t = \alpha - \frac{1}{\sqrt{x} + f(y)}$$

Columns can be included using `#cols[...][...]`

And this is

an example.

- Custom spacing: `#cols(columns: (2fr, 1fr, 2fr), gutter: 2em)[...]`
- Sample references: [1], [2].
  - Add a **bibliography slide**...

1. `#let bib = bibliography("you_bibliography_file.bib")`
2. `#bibliography-slide(bib)`
