Emmett **Brown**

Inventor · Theoretical Physicist

About me

Visionary inventor and theoretical physicist, renowned for pioneering work in time travel, flux capacitor technology, and unconventional scientific research. Adept at creative problem-solving, interdisciplinary collaboration, and pushing the boundaries of known science.

Interests

- Temporal Mechanics
- Quantum Physics
- Invention & Engineering
- DeLorean Restoration
- Science Education

DeLorean Time Machine

Back to the Future

Education

1951 **PhD in Physics**

California Institute of Technology — Pasadena, CA, USA

Dissertation: *"Theoretical Approaches to Temporal Displacement and Causality"*.

1943 **BSc in Engineering**

MIT — Cambridge, MA, USA

Thesis: *"Practical Applications of High-Voltage Circuits in Experimental Physics"*.

Professional Experience

1955 – present **Independent Inventor & Research Scientist**

Hill Valley Laboratory — Hill Valley, CA, USA

- Invented the Flux Capacitor, enabling practical time travel.
- Designed and constructed the DeLorean Time Machine and related temporal devices.
- Conducted groundbreaking experiments in temporal mechanics and quantum theory.
- Provided scientific mentorship to aspiring inventors and students.
- Published theoretical work on paradoxes, causality, and energy transfer.

1960 – present **Science Educator & Public Speaker**

Various Institutions — USA & Europe

- Delivered lectures and demonstrations on physics, engineering, and the ethics of scientific discovery.
- Organized science fairs and educational outreach for young students.

1955 – 1972 **Lead Research Physicist**

Pacific Science Institute — San Francisco, CA, USA

- Led a team of six researchers investigating applied electromagnetism and high-energy particle interactions.
- Designed experimental apparatus for controlled plasma discharge studies.
- Co-authored seven peer-reviewed articles on electromagnetic field theory.

Academic Experience

1985 **Visiting Professor: Temporal Physics**

Hill Valley University — Hill Valley, CA, USA

- Developed and taught courses on time travel theory and paradox management.
- Supervised student projects on experimental physics and invention.

1978 – 1984 **Adjunct Lecturer: Quantum Theory and Paradoxes**

California Institute of Technology — Pasadena, CA, USA

- Lectured on advanced quantum mechanics and paradoxes in theoretical physics.
- Organized interdisciplinary seminars on causality and time.

1952 – 1955 **Research Fellow: High-Energy Particle Physics**

MIT — Cambridge, MA, USA

- Conducted research on high-voltage circuits and early particle acceleration experiments.

Languages

English — Native

German — Intermediate

French — Basic

Physics & Engineering

- Temporal Mechanics
- Quantum Theory
- Nuclear Physics
- Mechanical Engineering
- Electrical Engineering
- Automotive Restoration

Technology

- Flux Capacitor Design
- Time Machine Construction
- Robotics
- Computer Programming

Other Skills

Creative Problem Solving · Scientific Communication · Workshop Safety · Mentoring Young Scientists · Improvisation · Experimental Design

Grants and Awards

1990 **Lifetime Achievement in Innovation**
International Society of Inventors — Geneva, Switzerland
Recognized for a lifetime of inventive contributions to science and engineering.

1986 **Best Experimental Demonstration**
World Science Congress — London, UK
Awarded for the live demonstration of the DeLorean Time Machine prototype.

1985 **Hill Valley Science Achievement Award**
Hill Valley Science Society — Hill Valley, CA, USA
Awarded for outstanding contributions to science and innovation in the community.

1979 **National Science Foundation Research Grant**
National Science Foundation — Washington, D.C., USA
Awarded \$340,000 for research into practical applications of electromagnetic flux in high-energy temporal systems.

1972 **CalTech Outstanding Alumni Award**
California Institute of Technology — Pasadena, CA, USA
Recognized for exceptional contributions to applied physics and interdisciplinary innovation.

Talks

1991 **From DeLorean to Locomotive: Engineering Time Machines**
Society of Inventors Annual Meeting — San Francisco, CA, USA
Panelist on the evolution of time travel technology.

1986 **Paradoxes and Causality: Lessons from Time Travel**
World Science Congress — London, UK
Invited talk on managing paradoxes and causality in theoretical physics.

1985 **The Flux Capacitor: A New Era in Temporal Mechanics**
International Physics Symposium — Geneva, Switzerland
Keynote on the invention and implications of the flux capacitor.

References

Marty McFly
Musician & Time Traveler — Hill Valley, CA, USA
Long-term collaborator and field assistant in temporal experiments.
Contact: marty.mcfly@hillvalley.com

Clara Clayton
Science Educator — Hill Valley, CA, USA
Advisor on science communication and educational outreach.
Contact: clara.clayton@hillvalley.edu
