⚠️ ISC Template — Fonts Not Installed

The fonts required by this template are **not installed** on this system. This document cannot be rendered with the correct typography.

(Yes — we appreciate the irony of a carefully typeset page telling you that typesetting is broken.)

Install the fonts by running this command once from the repository root:

```
source src/fonts/install_fonts.sh
```

Required fonts (all installed by the script above):

- **Source Sans Pro** / Source Sans 3 — body text
- **Fira Code** — source code listings
- **Inria Sans** — headings

After installing the fonts, recompile the document. See `README.md` for detailed instructions.
